

Monarchs & Milkweed

Creating Space For Pollinators

Wednesday, October 18

Monarch butterfly populations are in decline, largely due to a decline in habitat, specifically – milkweed. Join MT WILD and the Endangered Species Coalition to create a “Monarch Waystation” by planting native milkweed around the Center. Biologist Glenn Marangelo from the **Missoula Insectarium** will give a short presentation on the life history and conservation status of the N. American monarch butterfly, after we create new habitat.

Where: Montana Wild Education Center

When: Wednesday, October 18, 5:30pm

What: Help plant milkweed for migrating Monarch butterflies!

Bring: Gardening gloves and a friend. Please **call to register** so we know how many shovels and other supplies we will need.

MontanaWILD
2668 Broadwater Avenue
Helena
